

LINKING SAMPLES

(USING DATASIGHT)

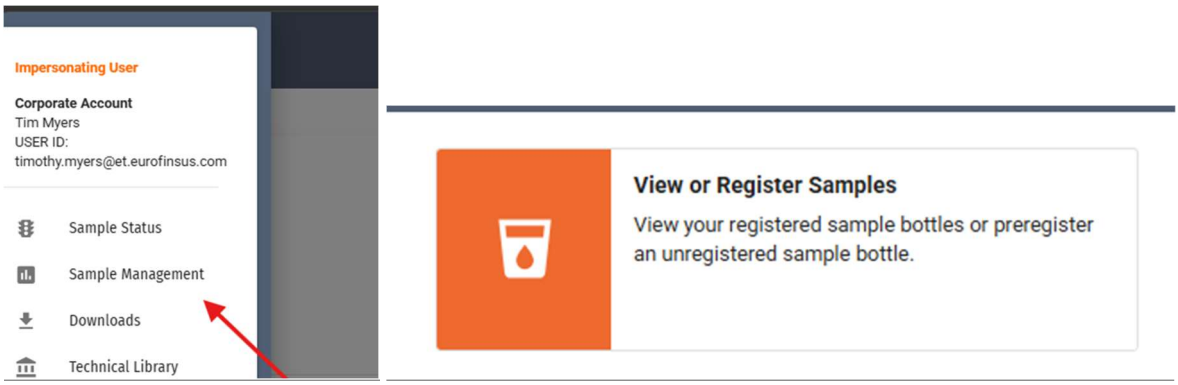

- Customers can pre-link their sample bottles to their equipment in Datasight.
    - Note: this is only available with AssetLink QR Code Labels, not our standard labels. If you want to receive AssetLink QR Code Labels, please reach out to us at Testoil.AccountManagement@et.eurofinsus.com

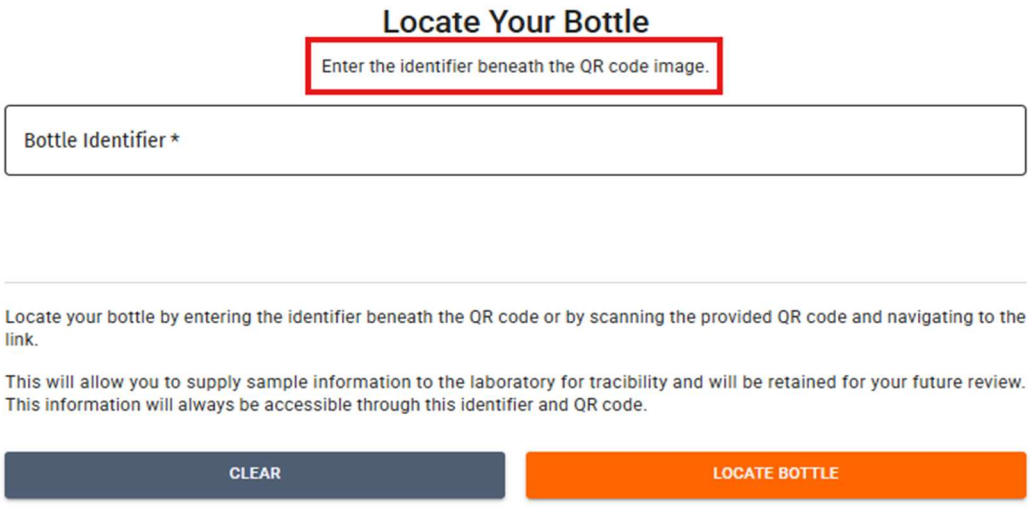

- To do this: either scan the QR code on the bottle to be directed to Datasight, or log into Datasight and click the three bars in the upper left-hand corner.

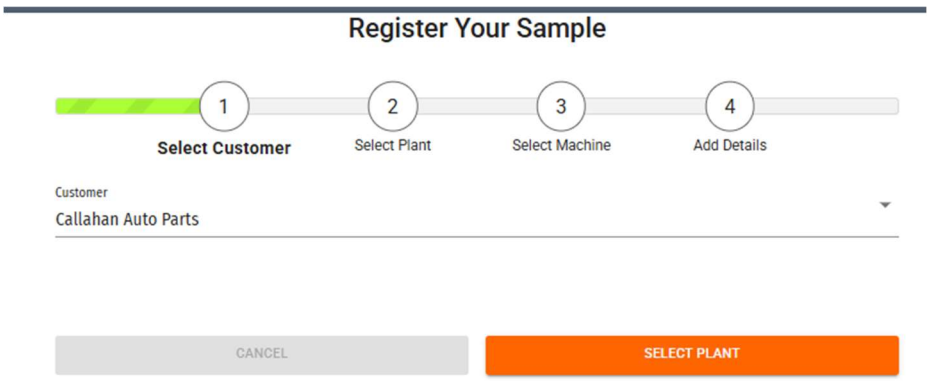

- Select **Sample Management** and then **View or Register Samples**.

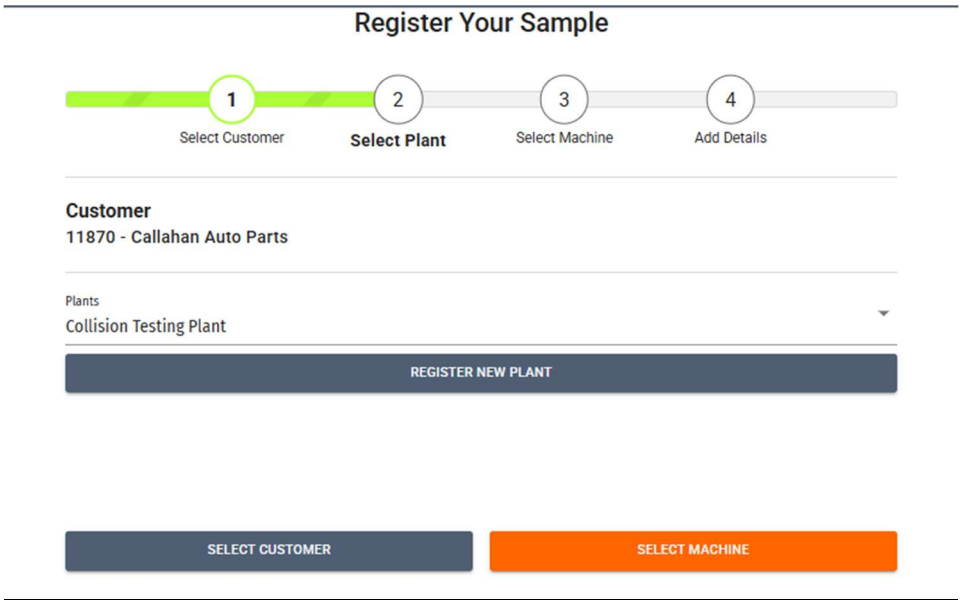

- Enter your sample bottle number (if you did not already scan the QR code).
    - Note: the Bottle Identifier is the number beneath the QR code.

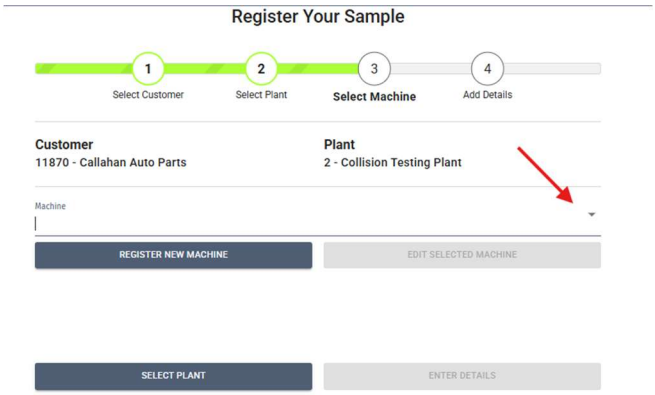

- Select your Company Name and then the click Select Plant (location/area) from the fields provided and then click **Select Machine**.

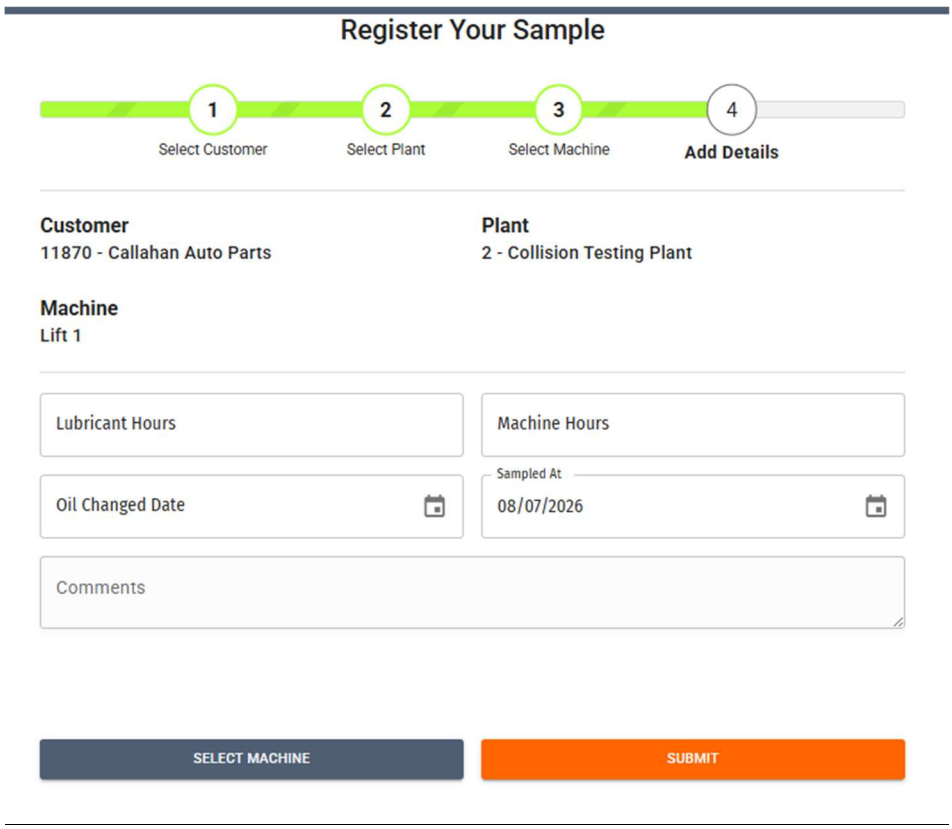

- Next, select the machine you want to link from the drop down list, or register a new machine and click **Enter Details**.

- If the information requested is known, enter here. The only field **required** to be completed is the **Sample Date**. Then click **Submit**.

- The sample is now linked to the machine.
